EQUALITIE'S POSITION ON THE WAR IN UKRAINE

On: *March 15, 2022* | Comments Disabled

We choose to stand with Ukrainians who are defending their homes and families. We mourn the lives already lost and the destruction of Ukrainian cities and its cultural heritage.

Share the web!

CENO (short for censorship.no!) is the world's first mobile browser that side-steps current Internet censorship methods. Its peer-to-peer backbone allows people to access and share web information in and across regions where connectivity has been interrupted or compromised.

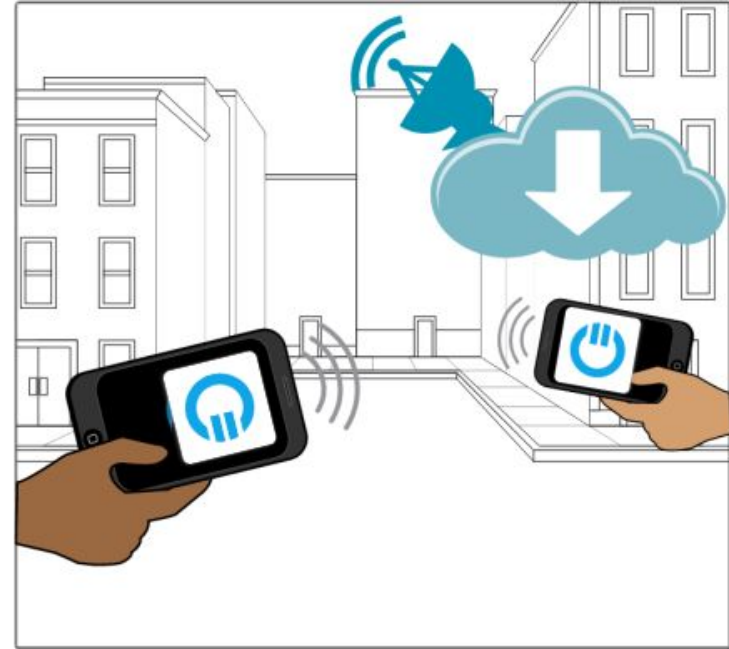

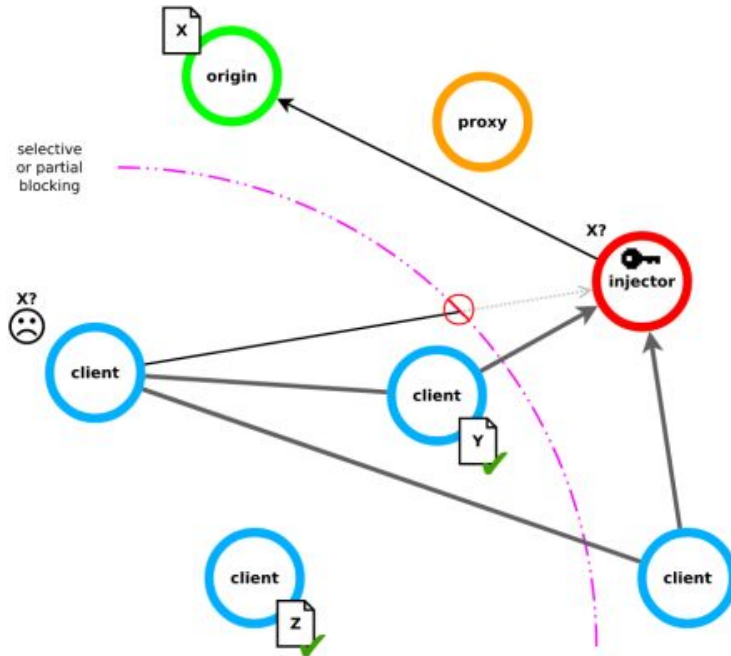

CENO - web browsing via Bittorrent

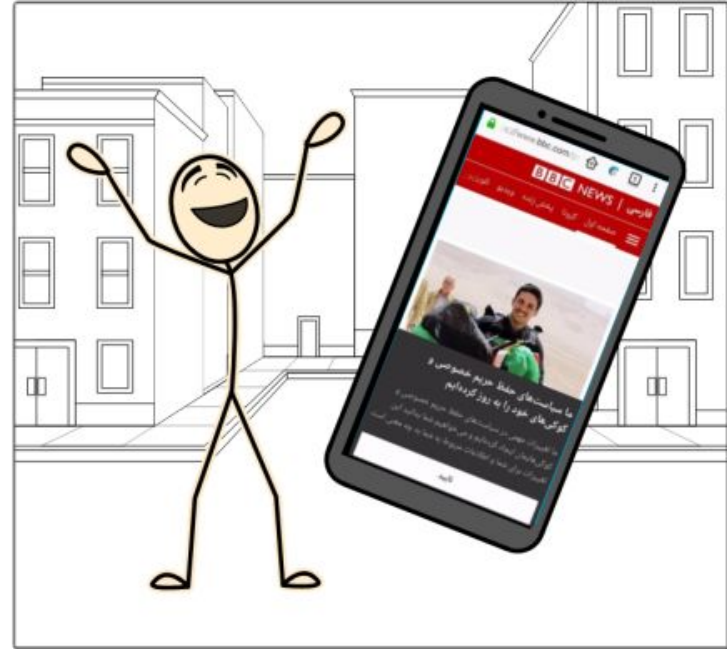

CENO is a mobile web browser for storing and sharing web content anywhere.

CENO - cooperative browsing

CENO users create small-world networks to connect to each other, and thereafter to a bridge outside the censored zone.

CENO - decentralized caching

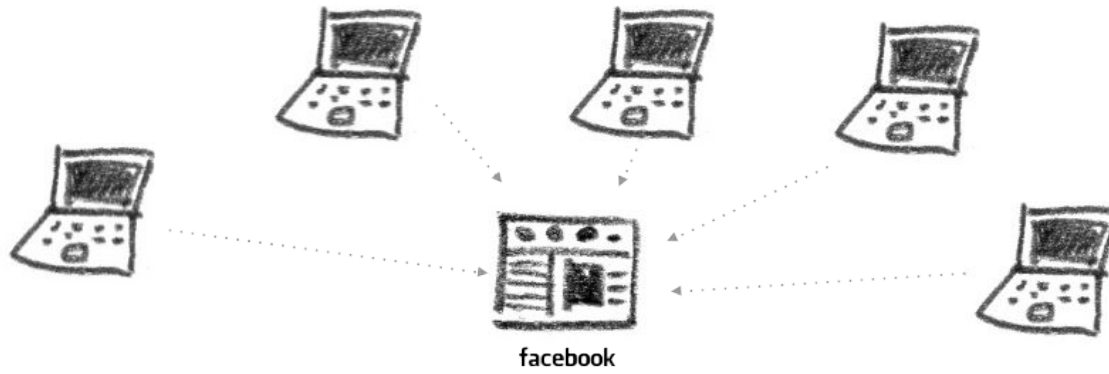

Once a website is accessed by a single CENO user, it is stored and shared inside the country peer-to-peer.

Internet shutdown - scenario #2
Disconnection of external connectivity

Internet 2.0 VS Internet 3.0

Scenario 2 solution - decentralized communications

ABOUT
